

Mercedes-Benz

Technical Data

GLC 400 4MATIC with EQ Technology SUV

As of: 24 October 2025

Motor, drive and battery		
Drive system		All-wheel drive
E-motor(s)		PSM/PSM
Rated power (peak) (electric)	kW	360
Rated torque (peak) (electric)	Nm	800
Battery type		Lithium-ion
Max. recuperation power	kW	Up to 300
Max. AC charging power (standard/option)	kW	11.0 /22.0
AC charging time three-phase (standard/option)	h	10.00/5.25
Max. DC charging power	kW	330
DC charging time 10%-80% SOC (net) ¹	min	22
DC charging: range after 10 minutes ²	km	up to 305 km
Suspension and steering		
Front axle		Front springs: coil spring
Rear axle		Rear springs: coil spring
Front brakes	mm	Brake type: Discs, internally ventilated Disc or drum diameter: 370
Rear brakes	mm	Brake type: Discs, internally ventilated Disc or drum diameter: 360
Dimensions and weights		
Number of doors/seats		5/5
Length/width/height	mm	4,845/1,913/1,644
Wheelbase	mm	2,972
Turning circle (with rear-axle steering)	m	12.1 (11.2)
Luggage compartment capacity, VDA ³	l	570 -1,740
Frunk Volumen liquid/ VDA ³	l	100/128
Kerb weight according to EC ⁴	kg	2,535
Payload	kg	505
Gross vehicle weight	kg	3,040
Permissible trailer load, unbraked, braked [at 12%]	kg	750/2,400
Performance, consumption and range		
Acceleration 0 - 100 km/h	s	4.3

Top speed	km/h	210
Energy consumption (combined) ⁵	kWh/km	18,9 – 14,9
CO ₂ emissions (combined) ⁵	g/km	0
CO ₂ class ⁵		A
Electric range ⁵	km	568 - 715

¹ The charging times correspond to a 10-80% charge when using a DC fast charging station in the “K” or “L” category in accordance with EN17186 with a charging current of 500 A.

² At DC fast-charging stations with 500 amps, based on the WLTP range

³ according to Directive ISO 3832:2002-06. Boot capacity may differ depending on special equipment

⁴ Kerb weight, ready-to-drive in accordance with EU.

⁵ The stated figures were determined in accordance with the prescribed WLTP (Worldwide harmonised Light vehicles Test Procedures) measuring process. The specified ranges refer to the European market. The energy consumption and CO₂ emissions of a passenger car depend not only on the efficient utilisation of the fuel or energy source by the vehicle, but also on the driving style and other non-technical factors.
